

Boost-Game

Performance & Privacy for Students

Professional Challenge - Product Pitch
By Arnau Díaz

The Daily Struggle

1. Low Performance

- We use the same PC for study & gaming
- Background apps kill our RAM
- Games suffer from lag and low FPS
- Buying a new PC is too expensive

2. Zero Privacy

- We play when we should be studying
- Parents or teachers enter suddenly
- Closing the game takes too long
- We always get caught

Market Research

We analyzed the competition (Razer Cortex, ExitLag):
They only care about e-sports. They ignore student privacy.

Survey of 30 IT Students:

90%

Have panicked when
someone entered the
room

85%

Use the exact same PC
for homework and
games

70%

Suffer from lag due to
study apps in
background

The Solution: Boost-Game

A desktop application built specifically for the reality of a student.

Performance Engine

Suspends non-essential background apps to maximize your FPS safely.

Stealth Technology

The ultimate panic button to protect your privacy at home in emergencies.

The Secret Weapon: Stealth Mode

1. Playing

You are playing a game. Suddenly, someone opens your door.

2. Press F12

The global hotkey triggers the emergency protocol instantly.

3. Safe

Game minimizes. Audio mutes. Study apps open automatically.
